

Eric W. Henderson

devCodeCamp

CapStone.

A platform for a business in this case an independent photographer to manage their business and clients.

1. As a guest to the site, I want to view services and then register for an account. Anyone can register.
2. As a client and registered user, I want to request an appointment with this studio for services. Appointments must be approved by business owner.
3. As a client, I want to choose on location at the studio or at a remote site of clients choosing.
4. As a client, I want to see an invoice due for services.
5. As a client, I want to make payment for services using Stripe API.
6. As a client and business owner, I want to be able to communicate through a Gmail API.
7. As a business owner, I want to manage/edit a client's appointment and update client through Gmail API.
8. As a business owner, I want to take payment through the application using Stripe API.
9. As a business owner, I want to accept/deny client appointment requests.
10. As a business owner, I want to see denied requests for review and the ability to send an email and reach out try and reconnect via Gmail API.
11. As a business owner, I want to see my appointment history to analyze my business and display appointments per month. During the slow months you can run extra advertising via email blast or even advertise a promo on home page.
12. As a business owner, Use the Instagram API to display past work to prospective clients.
13. As a photography site it should be nicely styled. "needs to be pretty"
